BASF (formerly Ciba) Irgalube 349 is a corrosion inhibitor and antiwear (AW) additive based on an amine salt of an alkyl phosphate. Irgalube 349 is typically recommended for use in lubricants with incidental food contact as well as in engine oils and power transmission oils, greases, metalworking fluids, and industrial lubricants. 4.8% Phosphorous and 2.7% Nitrogen.

While Irgalube 349 is a good product, it is Tri-iso's opinion that Functional Corrosion Inhibitor CI-426 is a much better option. CI-426 is also a corrosion inhibitor and antiwear additive based on an amine salt of an alkyl phosphate. CI-426 is NSF HX-1 registered for use in lubricants with incidental food contact.

Irgalube is a registered trademark of BASF. Tri-iso does not distribute Irgalube 349 or other BASF products.
