BASF Irganox 259

BASF Irganox 259 is a high molecular weight sterically hindered phenolic antioxidant specifically recommended for use as a non discoloring stabilizer for organic substrates such as POM, PET, and synthetic rubbers. Supplied as a white to slightly yellow crystalline powder.

While Irganox 259 is a good product, it is Tri-iso's opinion that Rhein Chemie Additin RC 7209 is a much better option. Additin RC 7209 is an phenolic antioxidant based on hexamethylene bis[3-(3,5-di-tert-butyl-4-hydroxyphenyl) propionate]. Additin RC 7209 is a direct drop-in replacement for Irganox 259 (chemically identical). Additin RC 7209 is specifically marketed for use in hydraulic fluids, metalworking fluids, industrial gear oils, turbine oils, polyglycols, and use with natural and synthetic esters. However, Additin Rc 7209 is suitable for all uses indicated for Irganox 259. Supplied as colorless crystals. NSF HX-1 registered for lubricants with incidental food contact.
