BASF Irganox L 135

BASF Irganox L 135 is a high molecular weight phenolic antioxidant. Suitable for use a 0.1-0.5% in industrial lubricants, 0.2-0.8% in engine oils and transmission fluids. Easy to handle liquid. Provides superior protection against oxidation and deposit formation. Replaces methylene-bis-phenols in a cost effective manner. Supplied as a clear, yellow to amber liquid.

While Irganox L 135 is a good product, it is Tri-iso's opinion that Rhein Chemie Additin RC 7235 is a much better option. Additin RC 7235 is an phenolic antioxidant based on benzenepropanoic acid, 3,5-bis (1,1-dimethylethyl)-4-hydroxy-, C7-9-branched alkyl esters. Additin RC 7235 is a direct drop-in replacement for Irganox L 135 (chemically identical). Suitable for hydraulic fluids, metalworking fluids, industrial gear oils, turbine oils, polyglycols, and use with natural and synthetic esters.

Irganox is a registered trademark of BASF. Tri-iso does not distribute Irganox L 135 or other BASF products.
