BASF Plurasafe WI 165 is a water insoluble polyalkylene glycol (PAG) based on propylene glycol monobutyl ether (a PO homopolymer). Supplied as a liquid with kinematic viscosity: 35 cSt at 40C and 6.8 cSt at 100C. Density of 0.981 g/mL @ 20C.

While Plurasafe WI 165 is a good product, it is Tri-iso Tryline’s opinion that GEOlube B-35 is a much better option. GEOlube B 35 is also a water insoluble polyalkylene glycol (PAGs) based on a PO homopolymer. Suitable for use in water insoluble lubricants. Particularly suitable for gear, hydraulic and compressor lubricants. Supplied as a low viscosity liquid (33 cSt at 40C).

Plurasafe is a registered trademark of BASF. Tri-iso Tryline does not distribute Plurasafe or other BASF products.
