CARPOL® PGP-4000 Polyether Polyol

CARPOL® PGP-4000 is a propylene glycol-initiated polyether polyol. The resulting material has a functionality of two and an average molecular weight of 4000 Da. This diol is polymerized solely with propylene oxide for controlled reactivity. Main applications include C.A.S.E., however, CARPOL® PGP-4000 may also be included as a component in other urethane products and formulations.

Typical End Use Applications
- Coatings
- Sealants
- Binders
- Caulks
- Adhesives
- Elastomers
- Spray Coatings
- Sport Surfaces

Storage Information

CARPOL® PGP-4000 will absorb water if the product container is not secured properly. This may affect reactivity, appearance, and performance. Therefore, it is advised that all receptacles containing this material be tightly fastened and stored in a dry place.

Consult the Safety Data Sheet for additional information.

Health and Safety Information

Health and safety information is available in the form of a Safety Data Sheet. This literature, describing proper precautions and personal protective gear, is available for review. To receive this information please contact a Carpenter Co. representative.

Ordering and Shipping Options

CARPOL® PGP-4000 can be acidified to a nominal pH of either 5 or 6 upon request. These materials are denoted as CARPOL® PGP-4000-50 polyether polyol and CARPOL® PGP-4000-60 polyether polyol, respectively.
