CARPOL® GP-6307 is a glycerin-initiated polyether polyol. The resulting material has a functionality of three and an average molecular weight of 6300 Da. This triol is polymerized with propylene oxide and then capped with 7% ethylene oxide. The outcome is a polyol with enhanced reactivity. Main applications include C.A.S.E., however, CARPOL® GP-6307 may also be included as a component in other urethane products and formulations.

**Typical End Use Applications**
- Coatings
- Sealants
- Binders
- Adhesives
- Elastomers
- Caulks
- Spray Coatings
- Sport Surfaces

**Typical Analytical Properties**
- Hydroxyl Number (mg KOH / g) 27
- pH (10 parts of IPA: 6 parts of H₂O) 7.0
- Moisture (%) [maximum] 0.04
- Color (APHA) [maximum] 35
- Appearance Free & Clear
- Viscosity @ 25 °C (cP) 1180
- Density @ 25 °C (lb / gal) 8.49
- Potassium (ppm) [maximum] 1.0

Please note that these values are not specifications

**Storage Information**

CARPOL® GP-6307 will absorb water if the product container is not secured properly. This may affect reactivity, appearance, and performance. Therefore, it is advised that all receptacles containing this material be tightly fastened and stored in a dry place.

Consult the Safety Data Sheet for additional information.

**Health and Safety Information**

Health and safety information is available in the form of a Safety Data Sheet. This literature, describing proper precautions and personal protective gear, is available for review. To receive this information please contact a Carpenter Co. representative.

**Ordering and Shipping Options**

CARPOL® GP-6307 can be acidified to a nominal pH of either 5 or 6 upon request. These materials are denoted as CARPOL® GP-6307-50 polyether polyol and CARPOL® GP-6307-60 polyether polyol, respectively.
