M-238 is a solvent-based blend of contact and vapor phase inhibitors designed as an additive to aromatic, paraffinic, naphthenic, fluorocarbon and hydrocarbon-based products. It provides multimetal protection during operating and idle conditions. M-238 leaves a very thin film on ferrous and non-ferrous metal surfaces, which protects metals even in very humid atmospheres.

**FEATURES**
- Stable in hydrocarbon solutions
- Can be blended at every stage of production
- Works as a thin self-healing film
- Environmentally friendly
- Low VOC
- Protection is immediate
- Contains contact and vapor phase inhibitors
- Provides multimetal protection
- Effective at low concentrations
- Compatible with many antioxidants, EPs, anti-scuff products and other hydrocarbon-based additives
- Can be painted over*

*Tests show when M-238 was added to a naphthenic-based cleaner up to 5% by weight, there was no decrease in adhesion for a permanent acrylic-based topcoat on carbon steel.

**TYPICAL APPLICATIONS**
Use M-238 as an additive to:
- Solvents
- Synthetic formulations
- Hydrocarbon formulations
- Add to solvent or oil-based fluids @ 1-4% by weight

**TYPICAL PROPERTIES**
- Appearance: Clear yellow liquid
- Non-volatile Content: 70-75%
- pH: 8.5-9.0 (1% aqueous)
- Density: 7.5-7.6 lb/gal (0.89-0.91 kg/l)

Typical Performance Properties

M-238 was added at 4% to a synthetic hydrocarbon (S.H.) and a hydrocarbon cleaner. The panels coated with these solutions were tested. Results are in hours until failure. Failure is defined as the onset of visual corrosion.
