DOW PAPI 27 is a polymeric MDI (methylenediisocyanate). Primarily used in the production of polyurethane rigid insulation foam and polyisocyanurate foams. PAPI 27 is also suitable for use in polyurethane paints, adhesives, sealants, structural foams, microcellular integral skin foams, automotive bumper and interior parts, high-resilience foams and synthetic wood. 31.4% NCO. 180 cps at 25°C.

PAPI 27 is a good product, it is Tri-iso's opinion that Wanhua Yantai Wannate PM-200 is a much better option. Wannate PM-200 is also a polymeric MDI used in the production of rigid polyurethane foam, paints, adhesives, sealants, and elastomers. 30.2-32% NCO. 150-250 cps at 25°C. Wannate PM-200's physical properties are very consistent from lot to lot.

PAPI is a registered trademark of The Dow Chemical Company. Tri-iso does not distribute PAPI 27 or other Dow products.
