The Dow Chemical Company Ucon LB-250 is a water insoluble polyalkylene glycol (PAG) based on a PO homopolymer. Supplied at 46 cSt at 40°C.

While Ucon LB-1250 is a good product, it is Tri-iso Tryline’s opinion that GEOlube B-46 is a much better option. GEOlube B-46 is also a water insoluble polyalkylene glycol (PAGs) based on a PO homopolymer. Suitable for use in water insoluble lubricants. Particularly suitable for gear, hydraulic and compressor lubricants. Supplied as a low viscosity liquid (46 cSt at 40°C).

Ucon is a registered trademark of The Dow Chemical Company. Tri-iso Tryline does not distribute Ucon LB-250 or other Dow products.
