Huntsman Tioxide TR-60 is a super-durable grade of rutile titanium dioxide. Tioxide TR-60 is particularly suitable for use in OEM coatings, powder coatings, and coil coating applications. It provides high weatherability and durability. Tioxide TR-60 is treated with both inorganic and organic treatments, and is supplied at a minimum of 90% TiO2.

Tioxide TR-60 is an excellent product. However, it is Tri-iso's opinion that Tryline Titanium Dioxide R-245 HD represents a better value overall. Titanium Dioxide R-245 HD is treated with an alumina and silica treatment. This particular grade provides excellent dispersion, hide and gloss properties, and provide exceptional durability. Titanium Dioxide R-245 HD is suitable for use in aqueous and solvent-based coatings which require greater durability, and is supplied at a minimum 90% TiO2. Tryline Titanium Dioxide R-245 HD is proudly manufactured in the United States of America.
