Capa™ 2205

Description
- Capa™ 2205 is a standard grade linear polyester diol derived from caprolactone monomer, terminated by primary hydroxyl groups.
- It has a molecular weight of 2000 and a typical OH value of 56 mg KOH/g.
- White waxy solid.

Applications
- Capa™ 2205 has been specially developed as an intermediate for the production of high quality polyurethane elastomers.
- Can be used in polyurethane adhesive, surface coating and flexible foam applications.

Delivery forms
- Supplied in lacquered mild steel drums containing 200 kg net.

Storage
- The product should be stored in air-tight containers to prevent moisture pick-up from the atmosphere.

Typical properties
- Mean molecular weight: 2000
- Melting point, °C: 40-50
- Hydroxyl value, mg KOH/g: 56
- Acid value, mg KOH/g: <0.25
- Water content, %: <0.02
- Viscosity at 60°C, mPas: 435

Densities
- The typical specific gravity (SG) of the material, measured at 55°C c.f. water at 20°C, is 1.071.

Solubility parameters
- The solubility parameter (δ) is 9.34 – 9.43 (cal/cm³)½.

CAS no.: 36890-68-3
