Vanderbilt Molyvan L is an Antiwear (AW), Extreme Pressure (EP) and friction modifier based on an oil-soluble organic molybdenum additive containing sulfur and phosphorus. Suitable for use in engine oils, gear oils and greases.

While Molyvan L is a very good product, it is Tri-iso's opinion that Rhein Chemie Additin **RC 3580** is a better value. Additin RC 3580 is a direct drop-in replacement for Molyvan L. Additin RC 3580 is 2-ethylhexyl-Molybdenum dithiophosphate. Additin RC 3580 is suitable for hydraulic oils, industrial gear oils, engine oils and greases. Supplied as dark green liquid.

Molyvan is a registered trademark of Vanderbilt Chemicals, LLC. Tri-iso does not distribute Molyvan L or other Vanderbilt Chemicals' products.
