CARPOL® PGP-3920 is a propylene glycol initiated polyether polyol. The resulting material has a functionality of **two** and an average molecular weight of **4000**. This diol is a copolymer of propylene oxide and ethylene oxide. Main applications include C.A.S.E., however, Carpol® PGP-3920 may also be included as a component in other urethane products and formulations.

### Typical End Use Applications
- Coatings
- Sealants
- Binders
- Caulks
- Adhesives
- Elastomers
- Spray Coatings
- Sport Surfaces

### Typical Analytical Properties
- **Hydroxyl Number, mg KOH /g**: 29
- **pH, 10 parts IPA: 6 parts H₂O**: 7.0
- **Moisture, % maximum**: 0.04
- **Color, APHA maximum**: 35
- **Appearance**: Free & Clear
- **Viscosity @ 25°C, cps**: 1,000
- **Density @25°C, lbs / gal**: 8.60

### Viscosity Profile
- **Temperature, °C**: 77°F, 100°F, 120°F
- **Typical Shipping Temp. Range**: 100°F to 120°F
- **Viscosity Information**:
  - 77°F: 1,000 cps
  - 100°F: 460 cps
  - 120°F: 300 cps

Please note that these values are not specifications.

Updated February 2009
Storage Information

Carpol® PGP-3920 will absorb water if the product container is not secured properly. This may affect reactivity, appearance, and performance. Therefore, it is advised that all receptacles containing this material be tightly fastened and stored in a dry place.

Consult the Material Safety Data Sheet for addition information.

Health and Safety Information

Health and safety information is available in the form of a Material Safety Data Sheet. This literature, describing proper precautions and personal protective gear, is available for review. To receive this information please contact a Carpenter Co. representative.

Ordering and Shipping Options

Carpol® PGP-3920 can be acidified to a pH of 5.5-6.5 upon request. This material is denoted Carpol® PGP-3920-60.
