BASF EFKA 2040 (now known as EFKA SI 2040) is a silicone-based defoamer for solvent-based coatings. EFKA 2040 prevents the formation of foam and blisters during manufacturing and application. It is also suitable for airless spray, brush, and roller applications. EFKA 2040 is a solution of defoaming substances containing silicone.

While EFKA 2040 is a good product, it is Tri-iso’s opinion that AFCONA Defoamer 2040 is a much better option. Afcona 2040 Defoamer is a fluorocarbon modified silicone based defoamer for solvent-based coatings. Afcona 2040 Defoamer is a moderate defoamer with minimal side effects, and is recommended for use in medium-viscosity applications applied by spray and brush. Afcona 2040 Defoamer is suited for a wide variety of systems, including low-polar to high polar systems.

EFKA is a registered trademark of BASF. Tri-iso does not distribute EFKA PB 2040 or other BASF products.
