BASF Irganox 2246

BASF Irganox 2246 is a sterically hindered phenolic antioxidant. Irganox 2246 is recommended for use in protecting natural rubber compounds and light colored vulcanates.

While Irganox 2246 is a very good product, it is Tri-iso Tryline’s opinion that Evernox 2246 represents a much better value. Evernox 2246 is a direct drop-in replacement for Irganox 2246 (same CAS number: 119-47-1). Evernox 2246 is a hindered phenolic antioxidant based on 2,2’-methylenebis(4-methyl-6-tert-butylphenol). Evernox 2246 is particularly suited for use in protecting white, light colored and transparent vulcanates based on natural rubbers. Additionally, Evernox 2246 is suitable for use in ABS and POM.

Copies of the actual IR Spectra comparisons are available upon request.
