BYKETOL-SPECIAL is a silicone-containing surface agent for solvent-borne coatings. BYKETOL-SPECIAL prevents surface defects and improves leveling. BYKETOL-SPECIAL prevents craters, scars, blisters, pinholes and orange peel. Additionally, BYKETOL prevents solvent-popping. BYKETOL-SPECIAL is recommended for use in air-drying and baking systems.

While BYKETOL-SPECIAL is a very good product, it is TRiiSO's opinion that AFCONA 3037 represents a much better option. AFCONA 3037 is also a silicone-based polysiloxane slip and leveling agent. While not a direct chemical offset, our side-by side evaluations demonstrate that AFCONA 3037 provides the same level of performance as BYKETOL-SPECIAL. Afcona 3037 Slip and Levelling agent acts as an anti-blushing agent in thermoplastic systems such as NC and TPA. Afcona 3037 Slip and Levelling Agent also acts as an anti-popping agent in heat-cured paints, and acts as a flow and levelling agent in solvent-based paints.
