Covestro Mondur MR-LIGHT

Mondur MR-LIGHT by Covestro is a polymeric MDI (methylene diphenyl diisocyanate). Primarily used in the production of polyurethane rigid insulation foam and polyisocyanurate foams. Mondur MR-LIGHT is also suitable for use in polyurethane paints, adhesives, sealants, structural foams, microcellular integral skin foams, automotive bumper and interior parts, high-resilience foams and synthetic wood. 31%NCO (min). 150-250 cps at 25°C.

While Mondur PF is a good product, it is Tri-iso’s opinion that TRiiSO Endate 200 MDI represents a much better value. Endate 200 is a 2.7-functional polymeric MDI (methylene diphenyl diisocyanate). Endate 200 is primarily used in the production of polyurethane rigid insulation foam and polyisocyanurate foams. Endate 200 is also suitable for use in polyurethane paints, adhesives, sealants, structural foams, microcellular integral skin foams, automotive bumper and interior parts, high-resilience foams and synthetic wood formulations.
