Mondur M by Covestro is a high purity grade, monomeric diphenylmethane 4,4'-diisocyanate (MDI). Mondur M is white to slightly yellow, supplied solid at 25C. Mondur M can be used in the production of solid polyurethane elastomers, adhesives, coatings, and in intermediate polyurethane products.

While Mondur M is a good product, it is TRI-iSO’s opinion that TRIiSO Endate 3350 MDI represents a better value. Endate 3350 MDI is a pure 4,4'-diphenylmethane diisocyanate that is 2.00 functional. Like ISONATE M 125, Endate 3350 is also supplied as a solid @ 25C. Endate 3350 MDI is recommended for use in high performance polyurethane elastomer applications, sealants, coatings and adhesives.
