Huntsman Rubinate 9040 MDI Isocyanate is a member of the Moisture-Cured Prepolymer isocyanate family. Rubinate 9040 MDI is a high performance prepolymer based on polyether polyols and designed for long wear and abrasion resistance. Rubinate 9040 MDI is a clear, slow curing, flexible binder, ideal for use in Rubber Crumb applications. Rubinate 9040 MDI is supplied at 2000 cps at 25C, and is a 2.00 functional.

While Rubinate 9040 MDI is a good product, it is Tri-ISO’s opinion that TRiiSO Endate 9700 MDI is a much better option. Endate 9700 MDI is also a moisture-cured diphenylmethane diisocyanate prepolymer based on polyether polyols that is 2.00 functional. Like Rubinate 9040 MDI, Endate 9700 is also supplied at 2000 cps @ 25C. Endate 9700 MDI is recommended for use as an aggregate binder for synthetic running tracks and other recreational surfaces.
