Huntsman Corporation Rubinate 9447 MDI

Huntsman Rubinate 9447 MDI Isocyanate is a member of the Polyurea Prepolymer isocyanate family. Rubinate 9447 MDI is designed to be used in combination with resin blends containing polyetheramines and/or polyether polyols for the production of high-performance polyurea coatings and elastomers. Rubinate 9447 MDI has been developed with lower isocyanate content for the production of softer polyurea coatings. Rubinate 9447 MDI is supplied at 1200 cps at 25C, and is a 2.05 functional.

While Rubinate 9447 MDI is a good product, it is Tri-iso’s opinion that TRiiSO Endate 1230 MDI is a much better option. Endate 1230 MDI is also a polyurea prepolymer that is 2.05 functional. Like Rubinate 9447 MDI, Endate 1230 is also supplied at 1200 cps @ 25C. Endate 1230 MDI is recommended for use in the polyurea applications such as industrial maintenance, secondary containment and geotextiles.
