Huntsman Corporation Rubinate 9495 MDI

Huntsman Rubinate 9495 MDI Isocyanate is a member of the Polyurea Prepolymer isocyanate family. Rubinate 9495 MDI is designed to be used in combination with resin blends containing polyetheramines and/or polyether polyols for the production of high-performance polyurea coatings and elastomers. Rubinate 9495 MDI is a 4,4’ MDI isomer prepolymer developed for standard polyurea systems. It also contains propylene carbonate to control reactivity and viscosity. Rubinate 9495 MDI is supplied at 400 cps at 25°C, and is a 2.06 functional.

While Rubinate 9495 MDI is a good product, it is Tri-iso’s opinion that TRiiSO Endate 1511 MDI is a much better option. Endate 1511 MDI is also a polyurea prepolymer that is 2.06 functional. Like Rubinate 9495 MDI, Endate 1511 is also supplied at 400 cps @ 25°C. Endate 1511 MDI is recommended for use in the polyurea applications such as industrial maintenance, secondary containment and geotextiles.
