Huntsman Corporation Suprasec 2496 MDI

Huntsman Suprasec 2496 MDI Isocyanate is a modified polymeric diphenylmethane diisocyanate and a member of the Polymer Concrete MDI isocyanate family. Suprasec 2496 MDI is designed for use in a variety of polyols and a cement/filler aggregate to produce a high performance concrete material. Suprasec 2496 MDI is supplied at 85 cps at 25°C, and is a 2.52 functional.

While Suprasec 2496 MDI is a good product, it is TRiiSO’s opinion that TRiiSO Endate 3130 MDI is a much better option. Endate 3130 MDI is also a modified polymeric diphenylmethane diisocyanate. Endate 3130 MDI is designed for use in the production of polyurethane polymer concrete. It is specialized mid-functionality, polymeric MDI which offers a high degree of compatibility with a variety of polyols and cement mixtures. Like Suprasec 2496, Endate 3130 is also supplied at 85 cps @ 25°C.
