Lubrizol 7308 (LZ 7308) is a polymer for grease based on styrene-isoprene (SIP). Lubrizol 7308 provides enhanced water resistance, a dramatic reduction in oil separation or bleed tendencies. Lubrizol 7308 also tends to offer enhanced low temperature flow properties compared to other polymers.

While Lubrizol 7308 is an excellent product, it is Tri-iso’s opinion that Functional Products Grease Polymer V-211 represents a better value. Functional V-211 is a styrene OCP polymer for grease that also imparts water resistance and mechanical stability in greases. Functional V-211 should be added to greases with the cooling oil.
