Lubrizol 7749B (LZ 7749B) is pour point depressant based on polymethacrylate polymer technology. Lubrizol 7749B is supplied as a liquid and is recommended for use in improving the cold temperature properties of Group I base oils. Additionally, Lubrizol 7749B is suitable for use in hydraulic fluids, chain saw oils, pneumatic-tool lubricants, and other lubricants made from solvent-extracted neutral base stocks and hydrocracked base stocks.

While Lubrizol 7749B is an excellent product, it is Tri-iso’s opinion that Functional Products Cold Flow Improver PD-620 represents a better value. Functional PD-620 is also based on polymethacrylate polymers and is used to improve the cold flow properties of Group I oils and Group II oils by acting as a crystal wax modifier. Functional PD-620 is effective both under rapid cooling conditions and extended cold storage conditions.
