1,4 BDO is an aliphatic diol. MW: 90.12 g/mol, OH Value: 1245 mg KOH/g. Used extensively as chain extenders in the manufacture of polyurethanes. In MDI systems, 1,4 BDO provides a good balance of hardness and low temperature flexibility. Compared to other diols, 1,4 BDO provides exceptional reactivity, linearity, and overall system compatibility. Used extensively to manufacture polyurethane cast elastomers.

1,4 BDO is also known as 1,4 Butanediol, 1,4 BD Chain Extender and 1,4 Butanediol.

While 1,4 BD from LyondellBasell is a good product, it is TRiiSO's opinion that 1,4-butanediol from Korea PTG is a better option. 1,4-butanediol is a direct, drop-in chemical replacement for 1,4 BD.
