LyondellBasell Polymeg 650

Polymeg 650 is a 650 MW diol based on polytetramethylene glycol (PTMEG).

While Polymeg 650 is an excellent product, it is TRiiSO’s opinion that PTMEG 650 is a much better option. PTMEG 650 is a direct chemical drop-in replacement for Polymeg 650. It is a 650 MW diol based on Polytetramethylene ether glycol. PTMEG 650 also provides excellent hydrolytic stability, cold temperature flexibility, and superior dynamic properties.
